

# Institute Objectives

## Education

1. Publicize the science of natural climate cycles.
2. Publish educational material.

## Business

3. It is assumed the findings of natural climate cycle science can improve the accuracy of weather forecasting. If the 2 predictions made in the letter of 4 June 2010 prove accurate, the Institute will have, for a while, the reputation as the world's best weather forecaster. Can the Institute build on this reputation to become the world's leading distributor of accurate weather forecasts?

## Science

4. Fund research into natural climate cycle science. The Holy Grail: experimental evidence that clearly shows how the Sun and volcanoes change the contents of the atmosphere.
5. Publish the Journal of Natural Climate Cycles.

## Fundraising

6. While the publishing and business ideas may eventually support the Institute, fundraising is required to start.
